Spring Semester, 2014  
Eric V. Level, Instructor

In this Phase 4 of your Final Project, you'll demonstrate your working Final Project code in front of the rest of the teacher and the rest of the class.

Most students will present during the scheduled Finals Week class on Tuesday, 5/13. However, if you wish, \*\* you can arrange to present at some other time on either Monday, 5/12 or Wednesday, 5/14. However, you **MUST** make prior arrangements with the teacher (i.e. make a specific appointment) if you do the latter.

Prepare a simple cover slide to display at the start of your presentation. **It should list your name (and those of other team members if relevant), along with the title of your project.** Make sure you use a large font so that your slide is visible from the rear of the classroom.

You do not need to have any slides beyond this cover slide. However, you are free to create and display other slides as needed.

Your oral presentation and demonstration should be 10-15 minutes in length. Start by giving your name and briefly describe what you're going to present. Then do so, by first running your code and describing how it works. Be prepared to display your code and answer brief questions from the audience about it.

Finally, describe the problems and challenges you encountered during the project, and how you overcame them - or didn't.

If you are a team of two, your presentation should be twice as long: 20-30 minutes. Similarly, for a team of three, present for 30-40 minutes. And... all team members should speak equally during the presentation.

For this Phase 4, your presentation will be captured on video for the teacher's private records: the camera will be focused on the screen to capture it as video and your voice as audio. It will NOT record your "talking head" unless you wander in front of the screen.

Submit an electronic copy of your slide or slides to **HW 11 Dropbox (Phase 4)** on our D2L site. Give it some kind of descriptive name of your choice. You should have a set of comments at the top of each submitted file that identifies you and your team partner, if any.

You will be graded on whether you followed the above instructions exactly - and on how much effort you spent on the Final Project code. HW 12 ("Phase 5") will ask you to submit an electronic copy of your Final Project Python code, so don't do this here.
